

## **Graduate Programmer/Analyst/Administrator**

- Full-time Graduate Programmer for a diverse role developing a variety of client-specific and innovative proprietary web-based applications.

Are you a talented, versatile and self-motivated programmer living in Perth? Are you looking for an enjoyable work environment where your programming skills are appreciated, and where you'll be given the opportunity to learn on the job? Here's a unique opportunity to get your foot in the door of a boutique, multi-disciplined, centrally located firm established in 1990.

Working with a small, down-to-earth team, you will play a key role in the design and ground-up development of innovative online business systems, client-specific web-based solutions and ongoing development of significant proprietary content management and e-business systems.

The commencement date for this position is flexible, although an immediate start is preferable. If you are keen to learn new skills and are happy to take direction as part of a team, we look forward to receiving your application.

### **Key Responsibilities**

- Development and support of new and implemented systems and related interfaces.
- Providing support and project management to facilitate the development, implementation and management of web-based systems.
- Liaising with team members on projects and developing and supporting business solutions.
- Analysis of existing systems, prototyping, developing, testing and implementation of a variety of web-based systems.
- Development of project specifications, documentation, support policies and procedures to ensure the ongoing integrity of products and systems.
- Assisting with client-specific and internal project planning and mapping including the conversion of existing systems to .NET

### **Essential Criteria**

- Degree Level qualifications – Computer Science, Information Technology, Information Systems.
- Experience in ASP, .NET. & PHP
- Excellent working knowledge of HTML, DHTML, CSS and DOM.
- Client-side JavaScript experience.
- Experience in building and designing relational databases.
- Skilled in analysis, design and requirements specification
- Structured approach to application development.
- Excellent written and verbal communication skills

### **Desirable Criteria**

- Web server set-up, configuration and security experience (IIS, Apache)
- Experience in software engineering and object-orientated programming
- Understanding of ColdFusion and the Fusebox methodology.

### **Salary**

The starting salary of \$35,000 including super reflects the opportunity to learn on the job in this position. Salary reviewed annually.
